

COMPANY PROFILE

IS4IT is an owner-managed, independent IT company that offers its customers integrated solutions and services for all their IT and process landscapes. We focus on solution-oriented consulting and implementation for medium-sized and large companies as well as international corporations.

As a company with over 300 employees, we advise our customers impartially and competently on the basis of “best practice” approaches and latest technological developments: Starting with business processes, we plan the realization of projects and complete them on request. During subsequent operation, we also provide up to 7 x 24 hour support and employee training. Our range of experience gives us the flexibility needed to respond specifically to customer needs by providing systems comprising the right mix of standardized modules vs. individual solutions. We have successfully established ourselves as a full-service provider, especially in the small and mid-sized sectors.

With offices in Oberhaching, Berlin, Eschborn, Leinfelden-Echterdingen, Nuremberg, Obrigheim, Schwaig and an independent subsidiary in Zug (Switzerland), we are close to our customers. Thanks to the international experience of our staff and sophisticated service concepts, we can support our customers in their worldwide locations. Companies we serve come from banking and insurance, telecommunications, industry, mechanical engineering, automotive, services, public administration and media branches, among others.

With the solutions realized by IS4IT, we strive to offer our customers maximum benefits in terms of quality, sustainability and investment security. The safety and quality of our processes, offerings and solutions are certified according to ISO 9001 and ISO/IEC 27001. Our range of services covers the following main topics:

■ SERVICE DESK

Complete support for your employees and the department
■ from problem assumption to 7 x 24-hour support for users

■ CONSULTING

Business- & IT-consulting, architecture, organization and process design ■ from analysis, planning and implementation to project management ■ Atlassian
